Spokane Valley Tech students Keegan Phillips and Jason Todd teamed up to win the silver medal in the SkillsUSA National Additive Manufacturing Design Competition in Atlanta, Georgia on June 24. The additive manufacturing competition is a grueling three-day event where state champions from across the US are judged on their success solving real-world design challenges using their 3D printing/Computer Aided Design knowledge, creativity, design process expertise, and presentation skills. This year's competition included learning to use artificial intelligence for 3D printing optimization. Congratulations Jason and Keegan, incoming seniors at SVT!
